

# UNIVERSAL ACCESSORY KIT PG 5-8

## Description

The GP 5-8 Granule Jet Blasting Device is designed for removing carbonized material from the inlet channel and the inlet valves in combustion engines. The device is approved for models by BMW and MINI. A big advantage is the operation with walnut shell granule. It is organic and does not damage the motor compartment. After cleaning, the granule gets exhausted without any residues. The inlet channel and the inlet valves were cleaned — without any chemical auxiliaries. Due to the safety valve the maximal pressure can not exceeded. We recommend to wear protective clothes.

The universal suction adapters can be used in both vertically and horizontally installed motors.

## Benefits

- Effective removal of carbonized material
- Quick and easy installation
- Adjustment of the diameter for different extractors
- No use of chemical auxiliaries
- Simple use and sustainable results
- Suitable vacuum adapters depending of the motor type

## Scope of delivery

- Vacuum adapter 90°
- Vacuum adapter 250 mm

## Technical data

Suitable to	Granule Jet Blasting Device PG 5-8
Manufacturer	TKR

## Dimensions & Weight

L x W x H	cm x cm x cm
Weight	kg
